AT SIGNUM, the foundation of our practice is trust and relationships - with each other as partners, with our talented and dedicated staff, with our valued clients and with our community. Our process is deeply collaborative, and we believe strongly in the transformative power of architecture to enhance the quality of life. We are passionate about creating work that is not only sustainable, but an authentic response to the land and community.

Artesa Winery is designed almost entirely underground, within a landscaped berm.

The concept is dramatic, but the portal entry and hospitality spaces were imposing and stark. We redesigned the experience in two phases, first renovating the interior tasting areas, then re-conceiving the portal, turning it into a symbol of the new visitor experience.
